Work Experience

AI Developer, Glide Cloud Solution | Python, FastAPI, LLM Models *June2025 - Present*

- Leading a small team in backend development for a **mainframe system to cloud-native modernization** tool, building robust **AI based** architecture along with **Eval Pipeline**.
- Built **AI-powered conversational chat interfaces** for querying 6+ legacy mainframe code types (COBOL, JCL..etc) using LLM (Gemini, Claude) with **semantic search** and **conversation memory** - enabling 50+ engineers to understand legacy systems through natural language.
- **Designed an SME Feedback & Regeneration** system allowing Subject Matter Experts to review, annotate, and trigger re-generation of specific section of AI-produced documentation across 10 document types - **improving output accuracy by ~35%** over iterative cycles.
- **Engineered production-grade COBOL & JCL parsers** handling 15+ edge cases including dynamic call resolution, copybook extraction, and database entity detection (DB2, IMS, IDMS) - **achieving 95%+ parsing** accuracy across 500+ enterprise programs **spanning 25+ mainframe applications**.
- **Developed analytics dashboards and reporting APIs** for Lines of Code analysis, orphan/dead code detection, and real-time job tracking with pagination - **providing modernization visibility across 10K+ programs** and enabling data-driven migration prioritization for stakeholders.

Intern, PTC | Java, Selenium *Jul 2024 – May 2025*

- **Fixed 20+ UI Automation test cases** for the **ThingWorx Foundation** product, ensuring improved test coverage and stability.
- Conducted client-side **installer testing on both Windows and RHEL** systems, while also performing hands-on manual testing to ensure optimal product performance.
- **Collaborated with senior management** to identify actionable improvements, enhancing product quality and increasing user satisfaction.

Projects

AI RFP Evaluator / *Python, FastAPI, Langchain, RAG Pipeling, GroqAPI (LLaMA)* *April-2025*

- Built an **AI-powered RFP analysis system** using Groq (LLaMA), LangChain, and RAG that automates **80% of manual eligibility extraction** from government RFP PDFs.
- Designed a **semantic matching and scoring engine** that compares RFP requirements with company capabilities using LLM reasoning, enabling automated **eligibility decisions based on a 70% threshold**.
- Engineered an **end-to-end GenAI workflow** that processes **2+ PDF sources**, performs criteria/capability extraction, semantic scoring, and generates a **eligibility report** with detailed explanations.

AI-powered LPR/ *Python, YOLOv8, EasyOCR* *Feb-2024*

- Worked upon a web application utilizing **YOLOv8** for license plate recognition (LPR). Integrated with a vehicle database for comprehensive compliance checks (insurance, registration, PUC).
- Achieved a high mean average precision of 89%.
- Optimized processing of multilingual license plates, ensuring **accurate results within 25–30 seconds**.

Technical Skills

Languages & AI Skills: Python, SQL, matplotlib, pandas, NumPy, skikit-learn
Core Subjects: AI, ML, DL, DBMS, OS, OOP
Developer Tools: GIT, GitHub, Firestore, GCP Bucket, Elasticsearch, VectiorDB, JIRA

Education

Vishwakarma Institute of Technology Pune, Maharashtra
*B-Tech in **Artificial Intelligence and Data Science**, cgpa – 8.89* *Jan. 2021 – May 2025*

Residential Junior College Ahmednagar
HSC, Percentage – 93.33 2019-*2021*

Achievements

UBS Hackathon – 2nd rank *Apr 2024*

- Collaborated in a team to develop a Smart Bin project addressing real-life waste management challenges, securing a **top ranking** among 30 participating teams.

Executive Committee Member– IEEE Student Branch VIT, Pune

- I worked with the Technical and Design team on the successful planning and execution of college events, and I **led a Python workshop**.
